

	<p style="text-align: center;">Disposable Face Masks</p> 	<p style="text-align: center;">KN95 Disposable Face Masks</p> 	<p style="text-align: center;">Surgical Face Masks</p> 
<p>Description</p>	<p>Disposable face masks are not considered respirators but are recommended to protect against large-particle droplets. These masks help prevent the spread of COVID-19 by blocking droplets exhaled by the wearer.</p> <p>These masks have the following features:</p> <ul style="list-style-type: none"> • 3-layers of Protection: Made with three layers of soft non-woven polypropylenes that prevent the inhalation or exhalation of respiratory droplets. • Easy to Breathe Through: Highly breathable non-woven fabric makes breathing just as easy as if you weren't wearing a mask. • Comfortable Fit: This mask is only 0.04 mm thick and adds almost no pressure to your face. The elastic ear loops are flat and designed to fit the ear without excessive strain. • Skin-Friendly Materials: Made of soft, non-woven fabric that is odorless and soft to the touch to avoid skin irritation. 	<p>KN95 Disposable Face Masks are considered respirators and are similar to the US standard N95 respirator mask, though they are not exactly the same. They are approved by the CDC NPPTL Respirator Assessments to Support the COVID-19 Response.</p> <p>These KN95 masks have the following features:</p> <ul style="list-style-type: none"> • Complies with KN95 standards for CDC NPPTL Respirator Assessments to Support the COVID-19 Response • 3-layers of Protection: Uses a triple layer of melt-blown nonwoven material to block 95% of incoming particulates. • Secure Seal: The adjustable nose piece provides a secure seal. Easy Breathing: Advanced non-woven fabric is easy to breathe through. • Comfortable Design: Made with durable elastic straps and a skin-friendly, soft non-woven fabric optimized for long periods of wear.< 	<p>Surgical face masks are similar to the standard blue disposable face masks with one main difference. These have undergone fluid resistance testing and are flame retardant.</p> <p>Additionally, they come in sealed packs of 25 masks.</p> <p>These surgical face masks have the following features:</p> <ul style="list-style-type: none"> • Passed ASTM F2100-11 & F2100-19 Testing: These masks meet the ASTM F2100-11 & F2100-19 standards (see below for more details). • Come in sealed packs of 25: For whatever quantity you buy, these come in sealed packs of 25 masks to ensure maximum protection during transport and storage. • Made of 3-ply non-woven materials: These surgical masks come with three layers of protection. Spunbond Polypropylene(SPP), Polypropylene (PP), and Cellulose. • Easy to breath through: These masks ensure proper air flow and easy breathing for maximum comfort. • Skin-friendly materials: Made of skin friendly materials that allow long periods of wear. • One size fits all: With two elastic stretch loops that are securely welded to the mask, these 6.9" x 3.7" masks are intended to fit most adult wearers.
<p>Testing and approval</p>	<p>Passed YY/T0969-2013 standard for single-use face mask.</p>	<p>Complies with GB 2626-2006 to meet KN95 standards, which is on the CDC list for "Use of respirators approved under standards used in other countries that are similar to NIOSH-approved N95 respirators."</p>	<p>The product has been independently tested to meet the ASTM F2100-11 & F2100-19 Standard Specification for Performance of Materials Used in Medical Face Masks. Documentation available upon request.</p>
<p>Intended use and purpose</p>	<p>Fluid-resistant and provides the wearer protection against large droplets, splashes, or sprays of bodily or other hazardous fluids. Helps protect others from the wearer's respiratory emissions.</p>	<p>Filters out particles and viruses in the air. It reduces the wearer's exposure to particles including small particle aerosols and large droplets.</p>	<p>Similar to standard disposable masks, surgical grade face masks are primarily intended to protect others from the wearer's respiratory emissions. They also help prevent the wearer inhaling large droplets, splashes, or sprays of bodily or other hazardous fluids.</p> <p>These masks are NOT intended to filter particulates and should not be used where the infection risk level through inhalation exposure is high. They are also not intended for any use that would create an undue risk in light of the COVID-19 public health emergency.</p>
